

From Australia to Africa, both Americas, Asia, and Europe – where it is most widely cultivated today – the sunflower has captivated someone, marked someone's life, either as an agricultural crop, a source of oil and protein, or simply as an inexhaustible source of beauty.

Dr. Vladimir Miklič

All the short stories on this flight through space and time are connected to the sunflower and its influence on both small and large human communities and individuals throughout the history of civilizational development.

From joy to sorrow and from happenstance to misfortune - our captain connects it all in this *Flight Above the Sunflower Field*.

Dr. Dejan Jovanović

In his book, *Flight Over the Sunflower Fields*, Dr. Branislav Dozet weaves a story about distant continents and countries, about people similar to us in our everyday lives, but also about the great figures of the world whose lives and fates are connected to the sunflower plant. I will allow myself the freedom to call Dr. Branislav Dozet's approach in the book *Flight Over the Sunflower Fields* "sunflowerism."

Dr. Pavle Sklenar

*Flight Above the Sunflower Field*

Branislav Dozet
